OBJECTIVE

Software Engineer with 2.2 years of experience in backend heavy full-stack development, scalable system design. Looking for full-time roles that leverage my experience and skills in building scalable solutions

EDUCATION

Bachelor of Engineering, BMS Institute Of Technology & Management

2019 - 2023

Relevant Coursework: Computer Science and Engineering

CGPA : 8.9

SKILLS

Programming Languages	Go, Java, Python, Shell Scripting, Javascript, Typescript
Web Technologies	MERN stack (MongoDB, React.js, Node.js)
Database	SQL, MongoDB, Elasticsearch, Redis, Neo4j
Cloud & CI/CD	Amazon Web Services (AWS), Docker
Tools and Frameworks	Git, Jmeter, Postman
Software Development	Agile methodologies, Test-Driven Development

EXPERIENCE

Associate Software Engineer

Mar 2023 - Present

SignDesk

Bengaluru, IN

- Architected an Extract Transform Load (ETL) pipeline to migrate over 10 million S3 objects in a live environment using Go routines and Redis achieving zero downtime
- Configured AWS SES for domain impersonation using Golang, enforcing DKIM and DMARC based authentication to enhance email security and deliverability
- Integrated Elasticsearch into the existing application to provide dedicated global search functionality, implementing data loading and real-time synchronization pipelines to ensure up-to-date and efficient data retrieval
- Optimized Elasticsearch queries by designing refined filters and mappings, resulting in a 70% improvement in search request performance and accuracy
- Developed a reusable email fetching package in Go, incorporating concurrency, context cancellation providing enhanced control over the email retrieval process
- Authored shell scripts to automate package and repository update tasks, increasing productivity and reducing manual effort by 85%
- Containerized complete application using Docker to enable auto-scaling in cloud environments and utilized Docker Compose for streamlined on-premise deployments

PROJECTS

Search Engine

Built a scalable search engine in Golang to efficiently ingest large datasets using goroutines and channels. Implemented text preprocessing techniques including normalization, tokenization, stemming, and constructed an inverted index for fast retrieval. Conducted benchmarking to validate system scalability and throughput. ([Github](#))

ToolChain

Developed a Golang-based utility offering Base64 conversion, JWT token generation and verification, AES/DES encryption and decryption, and key generation. This service reduces the reliance on external tools by providing efficient API endpoints, preventing client crashes when handling large payloads. ([Github](#))
